-I- FUNCTION: THIS ENZYME CONVERTS PHYTOENE INTO ZETA-CAROTENE VIA TINTERMINISTRY OF PHYTOFULENE BY THE SYMMETRICAL INTRODUCTION OF TO DOUBLE BONDS AT THE C-11 AND C-11' POSITIONS OF PHYTOENE.

-I- COPACTOR: NAD, NADD, OR FAD (PROBABLE).

-I- ENZYME REGULARION: INHIBITED BY THE HERBICIDE NORFLURAZON IN A
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    01-OCT-1996 (Rel. 34, Created)

"Mammalian karyopherin alpha 1 beta and alpha 2 beta heterodimers: alpha 1 or alpha 2 subunit binds nuclear localization signal and beta subunit interacts with peptide repeat-containing nucleoporins."; proc. Natl. Acad. Sci. U.S.A. 92:6532-6536(1995).

-I- FUNCTION: REQUIRED FOR NUCLEAR PROTEIN IMPORT AND MEDIATES DOCKING OF IMPORY SUBSTRATE TO DISTINCT NUCLEOPORINS. SERVES A RECEPTOR FOR NUCLEAR LOCALIZATION SIGNALS.

-I- SUBUNIT: FORMS A COMPLEX WITH AN IMPORTIN ALPHA SUBUNIT.

-I- SUBURIT: BELONGS TO THE IMPORTIN BETA FAMILY.

-I- SIMILARITY: CONTAINS 1 HIPORTIN N-TERMINAL DOMAIN.

-I- SIMILARITY: CONTAINS 8 HEAT REPEATS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               4

                                             The present sequence is encoded by a cDNA sequence which was isolated from a breast tumour cDNA library. It is provided in a specification relating to compounds for immunotherapy and diagnosis of breast cancer. Breast tumour antigens and the polynucleotides that encode them may be used in the production of a pharmaceutical composition to be used in the production of a proliferated T cells and incubated antigen presenting cells are also required. The polypeptides and polynucleotides may also be used to produce a vaccine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             polypeptides. The sequences are useful for treating cancer, preferably breast cancer, in a patient or for stimulating an immune response. The brothucleotides and polypeptides are also useful in the diagnosis and monitoring of breast cancer. A method for detecting the presence of a cancer in a patient, comprises obtaining a biological sample from the patient, contacting the biological sample with a binding agent that binds to a breast tumnour polypeptide, detecting in the sample an amount of polypeptide that binds to the binding agent, and comparing the amount of polypeptide to a predetermined cut-off value, therefore determining the presence of a cancer in the patient. Sequences AAU82641-AAU82655 represent human breast tumour polypeptides of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Polynucleotides encoding breast tumour polypeptides, useful for treating breast cancer or stimulating an immune response -

The invention provides membrane-bound PRO polypeptides and polynucleotides encoding them. The PRO sequences of the invention were identified based on extracellular, domain homology screening. The PRO sequences have homology with proteins including LDL receptors, TIE ligands and various enzymes. The membrane-bound proteins and receptor immunoadhesins, for instance, can be used as therapeutic agents. Receptor receptor-ligand interactions. The membrane-bound proteins can also be employed for screening of potential peptide or small molecule inhibitors of the receptor/ligand interaction. The PRO encoding sequences are useful as hybridization probes, in chromosome and gene mapping and in the generation of antisense RNA and DNA. PRO nucleic acid sequences will also be useful for the preparation of PRO polypeptides, especially
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 PRO polypeptide; mammal; tumour; cancer; human; cattle; horse; sheep;

and rabbits but are preferably human. The polypeptides can be used to stimulate tumour necrosis factor (TNF) alpha release from human blood, when contacted with it. A specific polypeptide can be used to stimulate the proliferation or differentiation of chondrocyte cells. The PRO proteins can be used to determine the presence of tumours and also susceptibility to tumour development, particularly adrenal, lung, colon, breast, prostate, rectal, cervical, or liver tumours, in mammanian subjects. The oligonucleotide probes specific for the PRO nucleic acids can be used for genetic analysis of individuals with genetic disorders.

Sequences AAU29024-AAU29328 represent PRO polypeptides of the invention. The PRO polypeptides and their associated nucleic acids can be used to detect the presence of a tumour in a mammal by comparing the level of expression of a PRO polypeptide in a test sample of cells from the animal and a control sample of normal cells, whereby a higher level of expression in the test sample indicates the presence of a tumour in the mammal. Mammals include dogs, cats, cattle, horses, sheep, pigs, goats

The PRO proteins have cytostatic activity. The PRO proteins can be used for targeted delivery of bioactive molecules, such as toxins, radiolabels or antibodies, that cause cell death. PRO mucleotide sequences, and their fragments, can be used as hybridisation probes, in chromosomal and gene mapping, and in the generation of anti-sense RNA and DNA. They may also be used to produce transgenic animals which are
                                                                                                                                                                                                                                                                           used to develop and screen therapeutically useful reagents. The PRO mucleotide and protein sequence can be used for tissue typing and in treating cancer. Anti-PRO antibodies can be used in diagnostic assays. AAF44270 to AAF44470 represent PCR primers and hybridisation probes used in the isolation of human PRO sequences. AAF44687 to AAF44269 and AAB65154 to AAB65300 represent human PRO polynucleotide and protein sequences given in the exemplification of the present invention.

                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to an isolated antibody that binds to tumor-associated antipenic target (TAT) polypeptide. The antibody is used for treating and diagnosing tumours (e.g. breast, lung, liver or stomach tumours) in mammals, e.g. dogs, cats, cattle, horses, sheep, pigs, goats, rabbits, or preferably humans. The antibody may also be used in antibody-dependent enzyme mediated prodrug therapy (ADBPT). The antibody is also useful for the therapeutic treatment or for the diagnostic detection of cancer. TAT cDNA is useful in gene therapy. The present sequence is human TAT173 protein. TAT173 cDNA is designated as DNA64852-1589.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Trimeric polypeptide; tetranectin trimerising structural element; TTSE; fusion protein; ligand binding structure; toxin; enzyme; cytokine; artificial antibody; pharmacokinetic; pharmadynamic; gene therapy; transfection; imaging; tumour; human; tetranectin; H6FXTN23.

The invention relates to the design of trimeric polypeptides using polypeptide structural elements derived from the tetranectin protein family onlypeptides constructed as a monomer polypeptide construct comprise at least one tetranectin trimerising structural moistures to construct comprise at least one tetranectin trimerising structural construct comprise at least one tetranectin trimerising structural moiety, the TYSE being capable of forming a stable complex with 2 other moyof the fusion proteins CIH6FXTN123, H6FXTN124, H6FXTN12, H6FXTN123 (AAW94261 to AAW94261). The TYSE can be used for the construction of structure, a toxin, a detectable label, an in situ activatable substance, an enzyme, a radioactive moiety, a cytokine, a non-proteinaceous polymer, a photo cross-linking agent, or a group facilitating conjugation of the constructs can be used construct to a target. They can be used as vehicles of a sembling antibody fragments into oligomeration multivalent constructs can be used for themedial for transfection or infection of the specific constructs can be used for transfection or infection of the specific constructs can be used for transfection or infection of the specific constructs can be used for transfection or infection of the specific constructs can be used for transfection or infection of the specific constructs can be used for transfection or infection of the specific constructs can be used for transfection or infection of the specific constructs can be used for transfection or threating a substance to a reinmant when a simmading or toxin-conjugated constructs can be used not a naise the navel or transfection or the specific constructs can be used not an also be used for delivering a substance to a reinmant when a simmading the navel or transfer or navention or transfer and the naventing a substance to a reinmant when a simmading the naventing a naventing a publication of the specific constructs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 antibody to a tumour. They can also be used for prevention or treating a disease or for diagnosis. The TTSE provides a stable structure which can act as a vehicle for a wide variety of conjugates. The present sequence represents a H6FKTN23 fusion protein sequence. The specification claims that the heterologous moiety to which the TTSEs of the invention are linked to is specifically different from the present fusion protein
                                                                                                                                                                                                                                                                                                                     New monomer polypeptide constructs for diagnosis and therapy - comprise a tetranectin trimerising structural element covalently linked to at least one heterologous moiety for providing functional
                                                                                                                                                                                      Holtet TL,
                                                                                                                                                                                                                    Thogersen HC;

Human tetranectin amino acid sequence. AAW94256 standard; protein; 181 AA. 26-APR-1999 (first entry) AAW94256; AAW94256

Trimeric polypeptide, tetranectin trimerising structural element, TTSE, fusion protein; ligand binding structure; toxin; enzyme; cytokine; artificial antibody; pharmacokinetic; pharmadynamic; gene therapy; transfection; imaging; tumour; human; tetranectin.

New monomer polypeptide constructs for diagnosis and therapy comprise a tetranectin trimerising structural element covalently linked to at least one heterologous moiety for providing functional Kastrup JS; Graversen NJH, Holtet TL Nielsen BB, Thogersen HC; 98WO-DK00245 97DK-0000685 (GRAV/) GRAVERSEN N J H. Claim 10; Page 60; 110pp; English.

CONSTINCT COMPITIES at least one Lettanettin Limitations of CONSTINCT COMPITIES at least one heterologous molety, the TTSE being capable of forming a stable complex with 2 other molety, the TTSE being capable of forming a stable complex with 2 other any of the fusion proteins CIIH6FYN1013, H6FYN1023, H6FYN1 preselected pharmacokinetic and/or pharmadynamic properties. The constructs can be used for targeted gene therapy involving selective delivery of the material for transfection or infection of the specific population of cells. They can also be used for delivering a substance to antibody to a tumour. They can also be used for prevention or treating a antibody to a tumour. They can also be used for prevention or treating a disease or for diagnosis. The TYSE provides a stable structure which can act as a vehicle for a wide variety of conjugates. The present sequence represents a human tetranectin sequence from which the TYSE can be polypeptide structural elements derived from the tetranectin protéin family. The trimeric polypeptides constructed as a monomer polypeptide construct comprise at least one tetranectin trimerising structural invention relates to the design of trimeric polypeptides using

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              RESULT 11
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AAM24034
                                                 AAR6052
                                                                                        ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to the design of trimeric polypeptides using polypeptide structural elements derived from the tetranectin protein family. The trimeric polypeptides constructed as a monomer polypeptide construct comprise at least one tetranectin trimerising structural element (TTSE) which is covalently linked to at least one heterologous moiety, the TTSE being capable of forming a stable complex with 2 other TTSEs, with the proviso that the heterologous moiety is different from any of the fusion proteins CIIHETAN123, HERTAN123, HERTAN12, HERTAN23 (AAW94261 to AAW94261). The TTSE can be used for the construction of conjugates with heterologous moieties such as a ligand binding structure, a toxin, a detectable label, an in situ activatable substance, an enzyme, a radioactive moiety, a cytokine, a non-proteinaceous polymer, a phonomer polypeptide construct to a group facilitating conjugation of the monomer polypeptide construct to a target. They can be used as vehicles for assembling antibody fragments into oligomeric or multivalent configurations.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      population of cells. They can also be used for delivering a substance to a cell or tissue or for delivering an imaging or toxin-conjugated antibody to a tumour. They can also be used for prevention or treating a disease or for diagnosis. The TTSE provides a stable structure which can
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            act as a vehicle for a wide variety of conjugates. The present sequence represents a H6FXTN123 fusion protein sequence. The specification claims that the heterologous moiety to which the TTSEs of the invention are linked to is specifically different from the present fusion protein

cDNA encoding human tetranectin (full sequence given in AAR60521) was PCR amplified using primers given in AAA071274-75. Amplified cDNA was linked to a sequence encoding the Factor-Xa cleavage site (given.in AAR60503), subcloned in vector pT7H6 so that it was linked to a hexahistidine-encoding sequence and expressed in E. coli BL21. The fusion protein was purified on an Ni2+-activated NTR-agarose column. A cyclic procedure was used to obtain correctly folded recombinant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

polypeptide structural elements derived from the tetranectin protein family. The trimeric polypeptides constructed as a monomer polypeptide construct comprise at least one tetranectin trimerising structural element (TTSE) which is covalently linked to at least one heterologous molety, the TTSE being capable of forming a stable complex with 2 other TTSEs, with the proviso that the heterologous molety is different from any of the fusion proteins CIHERTWIL23. HERTWIL23. H
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             preselected pharmacokinetic and/or pharmadynamic properties. The constructs can be used for targeted gene therapy involving selective delivery of the material for transfection or infection of the specific population of cells. They can also be used for delivering a substance to a cell or tissue or for delivering an imaging or toxin-conjugated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             antibody to a tumour. They can also be used for prevention or treating a disease or for diagnosis. The TTSE provides a stable structure which can act as a vehicle for a wide variety of conjugates. The present sequence represents a CIIHGFXTM123 fusion protein sequence. The specification claims that the heterologous moiety to which the TTSEs of the invention are linked to is specifically different from the present fusion protein
                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to the design of trimeric polypeptides using
                                                                                                                                                                                                                            New monomer polypeptide constructs for diagnosis and therapy - comprise a tetranectin trimerising structural element covalently linked to at least one heterologous moiety for providing functional
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Plasminogen activation; clot lysis; fibrinolysis; tissue growth; tissue repair; haemostasis; neoplasia therapy.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention provides the protein and coding sequences of novel proteins from a variety of organisms, including human, dog, cat, horse, cow, pig, hamster, monkey, macaque, yeast, bacteria, fruit fly, sea urchin and tomato. These were derived from expressed sequence tags (ESTs
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Trimeric polypeptide: tetranectin trimerising structural element; TTSE; fusion protein; ligand binding structure; toxin; enzyme; cytokine; artificial antibody; pharmacokinetic; pharmadynamic; gene therapy; transfection; imaging; tumour; human; tetranectin; CIIH6FXTN123.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            urchin and tomato. These were derived from expressed sequence tags (E from the organism of interest. They can be used in diagnostics, forensics, gene mapping, identification of mutations, to assess blodyversity and for nutritional purposes. The present sequence is a protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Isolated polypeptide for treatment of diseases, diagnostics, raising antibodies and research use -

                                                                                                                                                                                                                                             Tetranectin is comprised of four polypeptide chains having the formula shown in App60098. Tetranectin stimulates and controls the plasminogen activation resulting in a higher rate of clot lysis or fibrinolysis, esp. in the presence of blood platelets and in the presence of a complex fibrin clot from blood. It stimulates and controls the plasminogen activation in the absence of a cofactor such as polylysine.
                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                    New Tetranectin protein - purified from human blood plasma by e.g. affinity chromatography on a column with coupled kringle of plasminogen.

The invention relates to the design of trimeric polypeptides using polypeptide structural elements derived from the tetranectin protein (family) The trimeric polypeptides constructed as a monomer polypeptide construct comprise at least one tetranectin trimerising structural element (TTSE) which is covalently linked to at least one heterologous moiety, the TTSE being capable of forming a stable complex with 2 other TTSEs, with the proviso that the heterologous moiety is different from any of the fusion proteins CIHEFXTN123, HEFXTN12, HEFXTN12, HEFXTN13 (AAW94261 to AAM94264). The TTSE can be used for the construction of conjugates with heterologous moieties such as a ligand binding structure, a toxin, a detectable label, an in situ activatable substance, an enzyme, a radioactive moiety, a cytokine, a non-proteinaceous polymer, a proup facilitating conjugation of the monomer polypeptide construct to a tranger. They can be used as vehicles for assembling antibody fragments into oligomeric or multivalent configuration of the construction of the construct
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            antibody to a tumour. They can also be used for prevention or treating a disease or for diagnosis. The TTSE provides a stable structure which can act as a vehicle for a wide variety of conjugates. The present sequence represents a human tetranectin polypeptide fragment. The encoding nucleic acid sequence was amplified by PCR from the plasmid clone pTYH6FXTM133. This is used in the construction of E. coli expression vectors for the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      preselected pharmacokinetic and/or pharmadynamic properties. The constructs can be used for targeted gene therapy involving selective delivery of the material for transfection or infection of the specific population of cells. They can also be used for delivering a substance to a cell or tissue or for delivering an imaging or toxin-conjugated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Trimeric polypeptide; tetranectin trimerising structural element; TTSE;

The invention relates to the design of trimeric polypeptides using polypeptide structural elements derived from the tetranectin protein family. The trimeric polypeptides constructed as a monomer polypeptide construct comprise at least one tetranectin trimerising structural construct comprise at least one tetranectin trimerising structural element (TTSE) which is covalently linked to at least one heterologous moiety, the TTSE being capable of forming a stable complex with 2 other any of the fusion proteins CIHHERTN123, HERTN123, HERTN124, HERTN123 any of the fusion proteins CIHHERTN123, HERTN123, HERTN124, HERTN123 and conjugates with heterologous moiety as of part activatable substance, and norzyme, a radioactive moiety, a cytokine, a non-proteinaceous polymer, and photo cross-linking agent, or a group facilitating conjugation of the monomer polypeptide construct to a target. They can be used as vehicles for generating otherwise into oligomeric or multivalent entitles for generating chimmeric artificial antibodies having preselected pharmacokinetic and/or pharmadynamic properties. The constructs can be used for trangeted gene therapy involving selective delivery of the material for transfection or infection of the specific population of cells. They can also be used for delivering a substance to a rith a title antibody. They can also be used for delivering a substance to a rith a title.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   antibody to a tumour. They can also be used for prevention or treating a disease or for diagnosis. The TTSE provides a stable structure which can act as a vehicle for a wide variety of conjugates. The present sequence represents a H6FXtripa fusion protein sequence encoded by the plasmid
                                                                                                                                                                                                                                                                                                                                                      New monomer polypeptide constructs for diagnosis and therapy - comprise a tetranectin trimerising structural element covalently linked to at least one heterologous moiety for providing functional
